

HITCAP PROJECT DOCUMENTATION

3. Project Design Phase

Auto Ticket Classification using Flow Designer

3. Project Design Phase

The project design defines the data structure, field configuration, dependency relationship, automation flow, and notification mechanism required for the solution.

Custom Table Design

A custom table named Incident WorkFlow is used to store school IT ticket records. Auto Number is enabled for ticket identification.

Field Design

Field	Type	Reference / Choice
Number	Auto Number	—
Caller	Reference	sys_user
Category	Choice	Network, Hardware, Access, Performance
Subcategory	Choice	Wi-Fi, Projector, Forgot Password, Slow Computer
Short Description	String	—
Description	String	—
State	Choice	New, In progress, On hold, Resolved, Closed
Assigned Group	Reference	sys_user_group
Assigned to	Reference	sys_user

Category and Subcategory Dependency

The Subcategory field is configured as a dependent field on Category. The available Subcategory choices change according to the selected Category.

- Wi-Fi → Network
- Projector → Hardware
- Forgot Password → Access
- Slow Computer → Performance

Automation Design

The Flow Designer automation triggers when a record is created and the Category is empty. The flow evaluates the Short Description and updates Category and Subcategory according to the identified keyword.
