

HITCAP PROJECT DOCUMENTATION

5. Project Development Phase

Auto Ticket Classification using Flow Designer

5. Project Development Phase

The development phase implements the designed solution in ServiceNow.

Custom Table Development

- Open All menus → System Definition → Tables.
- Create the table with Label: Incident WorkFlow.
- Uncheck Create module.
- Save the table.
- Enable Auto Number from Controls and save.

Field Development

Create the required fields with the configured data types, choices, and reference fields. Choices are added to Category, Subcategory, and State.

Dependency Development

- Open the Subcategory field and select Configure Dictionary.
- Open Advanced view.
- Enable Use dependent field.
- Set Category as the Dependent on field.
- Configure the dependent choice values and save.

Flow Designer Development

- Open Flow Designer from Process Automation.
- Create a new Flow named Auto Classify School IT Tickets.
- Trigger: Record Created.
- Table: Incident Workflow.
- Condition: Category is Empty.
- Add If / Else If conditions based on Short Description keywords.
- Use Update Record actions to set Category and Subcategory.
- Add Send Email action for caller notification.
- Activate the flow.

Classification Logic

Condition	Category	Subcategory
Short Description contains Wi-Fi / Network	Network	Wi-Fi
Short Description contains Projector	Hardware	Projector
Short Description contains Forgot Password	Access	Forgot Password
Short Description contains Slow Computer	Performance	Slow Computer
