

HITCAP PROJECT DOCUMENTATION

6. Project Documentation

Auto Ticket Classification using Flow Designer

6. Project Documentation

The project documentation records the requirements, design, configuration, automation, testing, and deployment steps so that the solution can be understood and maintained.

Testing and Validation

- Verify mandatory fields are captured correctly.
- Verify auto-number is generated without duplication.
- Verify Category and Subcategory values are stored accurately.
- Verify reference fields resolve correctly.
- Verify email notification is generated for the caller.

Test Scenario 1 – Wi-Fi Issue

- Enter a Caller Name.
- Short Description: WiFi not working in library.
- Save and reload the form.
- Verify Category = Network.
- Verify Subcategory = WiFi.
- Verify that an email is sent to the caller.

Test Scenario 2 – Projector Issue

- Enter a Caller Name.
- Short Description: Projector not turning on.
- Save and reload the form.
- Verify Category = Hardware.
- Verify Subcategory = Projector.
- Verify that an email is sent to the caller.

Email Verification

- Open All menus → System Logs → Emails.
- Search using the configured email subject.
- Open the email record.

- Use Preview mail to verify the notification.

Deployment Documentation

- Open Local Update Sets and open Project Update Set.
- Change State from In progress to Complete.
- Save the form.
- Select Export to XML from Related Links.
- Use the downloaded XML update set for sharing or deployment.
