

HITCAP PROJECT DOCUMENTATION

7. Project Demonstration

Auto Ticket Classification using Flow Designer

7. Project Demonstration

The project demonstration is an end-to-end walkthrough of ticket creation, automatic classification, and email notification.

Demonstration Steps

- Open the Incident WorkFlow ticket form.
- Enter the Caller.
- Enter a Short Description describing the issue.
- Save the ticket.
- Show that Flow Designer processes the new record.
- Show the automatically populated Category.
- Show the automatically populated Subcategory.
- Open the email log and show the notification sent to the caller.
- Repeat with a second issue such as a projector problem.

Expected Demonstration Results

Demo Input	Expected Category	Expected Subcategory
WiFi not working in library	Network	WiFi
Projector not turning on	Hardware	Projector

Final Outcome

The completed solution demonstrates a no-code ServiceNow automation in which a newly created school IT ticket is classified from its Short Description, the appropriate Category and Subcategory are assigned automatically, and a confirmation email is sent to the caller.
